Wescon Plastics is a custom injection molder located in Wichita, Kansas. Operating since 1972, Wescon Plastics specializes in engineered resins to make tight tolerance products. Our tradition of total and complete commitment to quality can be seen throughout all phases of the company. **We put our customers' needs first and work hard to form long-lasting relationships with them.** Our engineers have over 40 years of experience and connect with our clients to design solutions that are unique to the demands of each product application.

We gladly offer engineering support and design assistance for every project and our team of experts collaborate on ideas to ensure your part is made to the highest caliber at an affordable rate. Our in-house, full-service mold shop preserves the life of your mold with routine cleanings and storage in our climate-controlled facility. We can also accommodate any customizations, changes or repairs your mold may require. From choosing the right resin to secondary assembly, you can be confident that Wescon Plastics will manufacture your parts with the highest degree of quality.

At Wescon Plastics, we are here to support and ensure your success from concept to production. Our top-tier processes and materials create better products and deliver greater value, while our consistent execution and support guarantee a superior final product.

**Our goal is to provide exceptional value through increased reliability and industry-leading technology.**
